# **Brant/Brantford Community Paramedics**

Partnering together in the provision of  
optimal care

*We are paramedics taking a proactive approach to  
healthcare by focusing on improving health outcomes  
among medically vulnerable people*

# About Us

Paramedics are highly trained medical professionals who are able to provide a range of home-based services, focusing on certain health conditions. Community paramedics work with your healthcare team and community services to provide the care and services you need. You can be assessed and treated in the comfort of your home, removing barriers and connecting you with services when and where you need them. There is **NO COST** for any of our services, all funding is provided by various provincial agencies and ministries.

## Wellness Clinics

Community paramedics host scheduled wellness clinics within identified adult lifestyle and city/county housing complexes. We provide health assessments, and some medical tasks. We consult with your care providers about your overall health and well-being. Information may be provided about medication management and ways you can improve your health and wellness.

We can also connect you with other community resources, helping to reduce barriers to accessing care.

## In-Home Services

Community paramedics can help you with in-home assessment and treatment services. Focusing on assisting you with managing your chronic disease such as COPD, CHF and others. We can provide a range of treatment and tests including injectable medications, vaccinations, change diabetic blood glucose sensors, basic bloodwork, urinalysis (only on physician initiated order), blood sugar average analysis, assist you with medication management, monitor your vitals or help you connect with other care services you need.

## Community Paramedic Long-term Care (CPLTC)

This program is funded by the ministry of long-term care with the goal of allowing residents to remain in their own homes if they wish and are able. Community paramedics will provide scheduled visits during the day and remain available 24/7 for non-emergency issues and requests for assistance from the patient and/or caregiver via phone or possible visit. Tools to assist with caregiver burnout are taught and referrals provided. Patients receive assessment, treatment, education and referral. The same treatments and tests available for in-home services are available. This program relies on a professional working collaboration with Home and Community Care Support Services, healthcare professionals, and community resources. This program does not register or place clients into long-term care.

*“I worry a lot less about my condition. They are informed and caring people with my best interest at heart. I feel very lucky to be involved in this program”  
(Client)*

# Community Paramedics Services
